

## Distribution of land area in Israel (dunam\*)

| Criteria                 | Total land | Irrigated land | Unirrigated land | Irrigated (%) |
|--------------------------|------------|----------------|------------------|---------------|
| Total area               | 29,600,000 |                |                  |               |
| Suitable for agriculture | 3,940,000  |                |                  |               |
| Field crops              | 2,100,000  | 456,000        | 1,644,000        | 21.7          |
| Vegetables               | 100,000    | 100,000        |                  | 100           |
| Horticulture             | 400,000    | 400,000        |                  | 100           |
| Greenhouses              | 20,000     | 20,000         |                  | 100           |
| Fish ponds               | 160,000    | 160,000        |                  | 100           |
| Other crops              | 55,000     | 55,000         |                  | 100           |
| Total utilized area      | 2,835,000  | 1,191,000      | 1,644,000        | 42.0          |
| *Unutilized area (%)     | 28.0       |                |                  |               |
|                          |            |                |                  |               |

\* 1 dunam = 1000 sq. meter

\*\*Unutilized = area in the desert, which is suitable for agriculture, but no water is available.
